Chapter 1

Preliminaries

1.1 Vector Spaces

Bases

Generating (span)

Independent System

Definition 1.1 (Independent). The system $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3, \dots, \mathbf{v}_n\}$ are called “Independent” iff

$$\lambda_1 \mathbf{v}_1 + \lambda_2 \mathbf{v}_2 + \dots + \lambda_n \mathbf{v}_n = \mathbf{0} \iff \lambda_i = 0$$

Definition 1.2 (Dependent). The system $\{\mathbf{v}_1, \mathbf{v}_2, \mathbf{v}_3, \dots, \mathbf{v}_n\}$ are called “Dependent” iff there exists some $\lambda_j \neq 0$ such that $j < n$ and

$$\sum_{i=1}^n \lambda_i \mathbf{v}_i = \mathbf{0}$$

Proposition 1. The system $\{v_1, v_2, v_3, \dots, v_n\}$ are dependent iff there exists j such that \mathbf{v}_j is the linear combination of the other vectors.

Proof. There exists $j < n$ such that $\lambda_j \neq 0$ and

$$\begin{aligned} \sum_{i=1}^n \lambda_i \mathbf{v}_i &= \mathbf{0} \\ \implies \lambda_j \mathbf{v}_j + \sum_{i \neq j} \lambda_i \mathbf{v}_i &= \mathbf{0} \\ \implies \mathbf{v}_j &= \sum_{i \neq j} \frac{-\lambda_i}{\lambda_j} \mathbf{v}_i \end{aligned}$$

And the converse is simple to prove. □

Proposition 2. If the system $\{v_1, v_2, v_3, \dots, v_n\}$ are both

Proposition 3. Bases \iff Generating + Independent
